ART UNIT PAPER NUMBER

2623

DATE MAILED: 06/03/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/779,919	GRAVES ET AL.	
	Examiner	Art Unit	
	Mehrdad Dastouri	2623	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 January 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-39 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-39 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment/remarks

1. Applicants' amendment filed December 27, 2004, has been entered and made of record.
2. Objection to Claim 7 has been withdrawn in view of Applicants' amendment.
3. Applicants' arguments regarding Claim 1 have been fully considered but they are not persuasive. Prior art of record (Laskowski) clearly disclose a reflectance ratio between the reflected light value of the test document and the master reflected light value (Figure 4; Column 7, Lines 51-67, Column 8, Lines 1-42). The sensed value set 38 is considered to be (x) data which are the test document 12 reflectance and 12 transmission values. The data values in the stored value set 42 are considered to be (y) data (12 reflectance and 12 transmission values). The formula in Column 8 Lines 19-23 clearly indicates the ration between (x) data and (y) data.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1-13, 25 and 28-31 are rejected under 35 U. S. C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, Line 17 recites, "the master transmitted light value". There is insufficient antecedent basis for this claim limitation.

Claim 25, Line 5 recites, "the master reflected light value". There is insufficient antecedent basis for this claim limitation.

Claim 28, Line 5 recites "the bill". There is insufficient antecedent basis for this claim limitation. Claims 2-12 and 29-31 depend on Claims 1 and 28, respectively.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-4, 6-9, 13-15, 18 and 21-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Laskowski (U.S. 5,923,413) in view of Carnes, Jr. et al. (hereinafter Carnes) (U.S. 3,976,198).

Regarding Claim 1, Laskowski discloses a doubles detection system for detecting doubled documents, the system comprising:

one or more light sources disposed on a first side of a test document (Figures 2 and 3, LEDs 32; Column 5, Lines 56-66);

one or more reflected light sensors disposed along the first side of the test document, and adapted to generate one or more reflected light signals (Figures 2 and 3, Reflectance Detectors 20; Column 6, Lines 13-21);

one or more transmitted light sensors disposed along a second side of the test document, and adapted to generate one or more transmitted light signals (Figures 2 and 3, Transmission Detectors 22; Column 6, Lines 13-21);

Art Unit: 2623

a memory storing one or more master reflected light values and one or more master transmitted light values (Figure 13, Memories 138; Column 19, Lines 1-11); and

a processor (Figure 13, Control Circuit 24, Processors 134) adapted to

(1) receive the reflected light signal (Column 18, Lines 44-48),

(2) generate a reflected light value for the test document (Column 18, Lines 44-48),

(3) calculate a reflectance ratio between the reflected light value of the test document and the master reflected light value (Figure 4; Column 7, Lines 51-67, Column 8, Lines 1-42; Figure 13; Column 18, Lines 66-67, Column 19, Lines 1-32),

(4) receive the transmitted light signal (Column 18, Lines 44-48),

(5) generate a transmitted light value for the test document (Column 18, Lines 44-48),

(6) adjust the master transmitted light value based on the reflectance ratio (Column 8, Lines 60-67),

(7) compare the adjusted master transmitted light value to the transmitted light value for the test document (Figure 4; Column 7, Lines 51-67, Column 8, Lines 1-67), and

(8) generate a signal if the comparison of the adjusted master transmitted light value with the transmitted light value for the test document indicates that the document is unfit for use (Column 4, Lines 14-22; Column 21, Lines 23-27).

However, Laskowski does not explicitly disclose presence of more than one document as the reason to be unfit to use.

Carnes, in the same field of endeavor, disclose a method of currency (document) examination implementing the procedure of comparing light transmissivity of a test document and a predetermined stored light transmissivity of currencies (Column 2, Lines 61-67, Column 3, Lines 1-47), and further disclosing:

generating a doubles signal if the comparison of the transmitted light value with the transmitted light value for the test document indicates that more than one document is present (Column 2, Lines 5-13).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Laskowski's invention according to the teachings of Carnes to generate a doubles signal if the comparison of the adjusted master transmitted light value with the transmitted light value for the test document indicates that more than one document is present because it will expand the versatility of detection system by providing double document detection capability. This will result in increasing the system accuracy by detecting the adhesion of one document (e.g., bill) to another; the overlapping of successively fed documents at an automatic examination system, and the severe mutilation of documents being examined (Carnes; Column 2, Lines 10-18).

Regarding Claim 2, Laskowski further discloses the doubles detection system of Claim 1 wherein the adjusted master transmitted light value determines a threshold for acceptable transmitted light values (Column 9, Lines 30-64; Column 14, Lines 14-33; Column 20, Lines 53-67)..

Regarding Claim 3, Carnes further discloses the doubles detection system of Claim 2 wherein a test document having a transmitted light value lower than the threshold is determined to be a doubled document (Column 6, Lines 34-39).

Regarding Claim 4, Carnes further discloses the doubles detection of Claim 3 wherein the doubled document is off-sorted into an output receptacle (Column 6, Lines 39-53).

Regarding Claim 6, Laskowski further discloses the doubles detection system of Claim 1 wherein the master reflected light value and the master transmitted light value are determined in a learning mode (Column 20, Lines 48-52).

Regarding Claim 7, Laskowski further discloses the doubles detection of Claim 1 wherein the master reflected light value and the master transmitted light value are determined, respectively, by averaging a plurality of individual reflected light values and individual transmitted light values for a series of master documents (Column 8, Lines 9-36).

Regarding Claim 8, Laskowski further discloses the doubles detection system of claim 1 wherein the master reflected light value and the master transmitted light value are determined, respectively, by averaging a plurality of individual reflected light values and individual transmitted light values for a series of test documents (Column 8, Lines 9-36).

Regarding Claim 9, Laskowski further discloses the doubles detection system of Claim 1 wherein calculating the reflectance ratio comprises dividing the master reflected light value by the reflected light value of the test document (Column 8, Lines 9-36, y_i is

Art Unit: 2623

divided by σ_x . Alternatively, dividing the master reflected light value by the reflected light value of the test document is a normalization process which is a well known procedure routinely implemented in double currency detection systems (Official Notice).).

Regarding claims 13-15, 18, and 21-39, arguments analogous to those presented for Claims 1-4 and 6-9 are applicable to claims 13-15, 18 and 21-39. Laskowski further discloses the A/d converter recited in Claims 28 and 36 (Figure 13, Component 124). Currency detecting systems conventionally process 800-1200 bills per minute.

8. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Laskowski (U.S. 5,923,413) further in view of Carnes, Jr. et al. (hereinafter Carnes) (U.S. 3,976,198) and Cargill et al. (hereinafter Cargill) (U.S. 5,430,664).

Regarding claim 5, Laskowski and Carnes do not explicitly disclose the doubles detection system of Claim 1 wherein the master reflected light value and the master transmitted light value are input manually.

Cargill teaches various thresholds can be set by the user (Column 2, Line 67, Column 3, Lines 1-3).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Laskowski's and Carnes combination according to the teachings of Cargill to set various thresholds by the user because it will provide a system that can react to more specific situations and thereby allow the user to limit the number of rejections and misinterpreted results.

Allowable Subject Matter

9. Claims 10-12, 16, 17, 19, and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 10-12, 16, 17, 19, and 20 of the instant invention recite multiplying a master transmitted light value by a reflectance ratio or its inverse, square, or squared inverse to make a determination as to the currency notes status as a double.

The features identified are neither discussed nor suggested by the prior arts of record.

Conclusion

10. **THIS ACTION IS MADE FINAL.** See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Contact Information

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mehrdad Dastouri whose telephone number is (571) 272-7418. The examiner can normally be reached on Monday to Friday from 8:00 a.m. to 4:30 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amelia Au can be reached on (571) 272-7414. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
